DETAILED ACTION

Response to Amendment

1. Applicant's arguments with respect to claims 1-15 have been fully considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-15 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by US patent No. 6,490,274 ("Kim").

Regarding claims 1, 6 and 11, Kim teaches a method and system for internet (254) cable phone (208, packet based terminal device) telephony service over internet protocol (IP) (addressing system) for enabling a calling party using a public switched telephone network (PSTN, 260) phone (256, circuit based terminal device), which is addressable via a telephone number, to initiate a communication connection to a called party who is using an IP addressable cable phone (208, a packet-based terminal device, which is addressable via an IP address) (See Fig. 2) comprising

directory information base (DIB, 218 as data storage means), for storing data in as a memory indicative of a correspondence between at least one IP address assigned to a 1ST cable phone (208, said called party's packet-based terminal device) and a corresponding PSTN telephone number assigned to 1ST cable phone (208, said called party's circuit-based terminal device),

1st headend unit (202 as terminal device location means), responsive to receipt of data from said calling party indicative of said called party's telephone numbers corresponding to 1ST cable phone (208, said called party's circuit-based terminal device), for retrieving data from DIB (208, said memory indicative of said IP address) assigned to a 1ST cable phone (208, called party's packet-based terminal device), and

1st router (216 as communication connection means), for establishing a communication connection between 1ST PSTN phone (256, said calling party's circuit-based terminal device) to 1ST cable phone (208, said called party's packet-based terminal device) (See Fig. 2, Col. 3, lines 53-67).

Regarding claims 2, 7 and 12, Kim further teaches that 1st headend (220 as terminal device locator means) for transmitting said IP address assigned to 1ST cable phone (208, said called party's packet-based terminal device) to at least one 1st Internet telephony gateways (ITG, 220 as packet-based communication service) to locate 1ST cable phone (208, said called party's packet-based terminal device).

Regarding claims 3, 8 and 13, Kim further teaches that 1st headend (220 as inquiry response means), responsive to receipt of a message from one of said at least one 1st ITG (220 as packet-based communication

services) indicative of a presence of 1ST cable phone (208, said called party's packet-based terminal device) on said one of said at least one 1ST ITG (220 as packet-based communication services), for extending a communication connection from 1ST PSTN phone (256, said calling party's circuit-based terminal device) to said one of said at least one 1ST ITG (220 as packet-based communication services).

Regarding claims 4, 9 and 14, Kim further teaches that 1st DIB (218 as directory means) for storing a set of data comprising data indicative of an IP address assigned to each of a plurality of a of 1ST cable phone (208, called party's packet-based terminal device).

Regarding claims 5, 10 and 15, Kim further teaches that 1st headend unit (202 as destination selection means) for providing said calling party with a list of 1ST cable phones (208, said called party's packet-based terminal devices), and

1st ITG (220 as service identification means), responsive to said calling party selecting a one of 1ST cable phones (208, said called party's packet-based terminal devices), for identifying a 1st ITG (220 as packet-based communication services) serving of 1ST cable phones (208, said called party's packet-based terminal devices) (See Fig. 2 and Fig. 4, Col. 5, lines 3-25).
